EDUCATION

2023 - Present

Ho Chi Minh City University of Technology and Engineering

Major: Information Security

ACTIVITIES

Jan 2025 - Present

Teaching Assistant

Basic Networking, Operating Systems, Information Security

Supported grading for labs, reports, examinations, and guided students in technical coursework.

2025 - Present

Vice President, HCMUTE Information Security Club

HISC

Participated in CTF competitions with focus on Cryptography and Forensics.

HONORS & AWARDS

1st Place at Sinh Vien voi An Toan Thong Tin HCMUTE (HCMUTE CTFs) 2024 & 2025

HO MINH HUY

Information Security Engineering

I aim to develop my career as a Networking Engineer. I am seeking an internship opportunity to strengthen my knowledge of computer networks, gain hands-on experience with network infrastructure, and apply what I have learned to real-world environments. Long term, I hope to contribute to stable, secure, and efficient network systems for organizations.

SKILLS

Network Fundamentals: TCP/IP, OSI, IP addressing, subnetting, routing, switching, VLAN, trunking, NAT, DHCP, DNS, ACL, and VPN technologies.

Routing and Switching: Classroom lab experience with VLAN, inter-VLAN routing, static/basic dynamic routing, trunking, EtherChannel, ACL, and troubleshooting.

Firewall and Network Security: FortiGate and Cisco ASA lab experience with security policies, NAT, VPN, access control, and basic internal network protection.

Web Application Firewall: FortiWeb lab experience configuring web security policies, protection profiles, and basic WAF rules for web applications.

Network Monitoring and Analysis: Monitoring traffic, logs, and abnormal behavior. Tools used: Wireshark, Wazuh, Splunk, and Elastic SIEM.

Programming and Scripting: Python, C/C++, C#, and Java; able to write simple scripts for troubleshooting, automation, and data processing.

PROJECTS

Enterprise Network Design

Project Link

Designed a scalable enterprise network for a headquarters and two branches with Data Center, DMZ, server farm, VLANs, WAN connectivity, and security zones; focused on availability, performance, security, and expansion.

Enterprise Network Configuration with Routing, Switching and VPN

Project Link

Built a hierarchical Core/Distribution/Access network. Implemented VLAN, VTP, Trunking, EtherChannel, NAT, ACL, Port Security, DHCP Snooping, RADIUS WiFi, firewall policies, and IPSec Site-to-Site VPN.

Network Security Monitoring System

Project Summary

Researched, deployed, and compared Zabbix, Cacti, PRTG, Nagios, and Wazuh for monitoring hosts, services, devices, logs, dashboards, and alerts via Email, Telegram, Discord, and voice call.

Web Application Firewall Deployment with FortiWeb

Project Link

Configured FortiWeb-100D to protect a vulnerable web application against SQL Injection, Cross-Site Scripting, CSRF, DoS/DDoS, malicious file upload, insecure HTTP headers, and unauthorized URL access.
